Sub: Higher level of Electrical Transformers – Study on Carbon Emissions

Dear Ma'am,

Reference our telephonic conversation a short while back regarding your last meeting with Mr. Vivek Jain, President, All India Transformer Manufacturers Association (AITMA) on 23rd July 2024.

During this meeting it came out whether the use of higher level of electrical transformers will increase the carbon emissions besides increase in cost of materials. During the course of this meeting it was also discussed that BIS may take up this matter as a research project, in which, AITMA would be pleased to provide necessary hardware i.e. transformer and requisite information.

AITMA has already submitted a representation dated 31st July 2024 in this regard along with some relevant data and information (the said representation is attached for your ready reference)

Looking forward to your further advice on this matter.

With warm regards,

Sudeep Sarkar
Director General
All India Transformers Manufacturers Association
